DEEP PLOWING PLANS LAG

KULAKS SABOTAGE DEEP PLOWING -- Szabad Szo, No 277, 29 Nov 49

Working peasants of Zemplen County have completed 62.2 percent of their fall deep plowing. Zemplenagard has completed its work 100 percent and Alsobereck, Felsobereck, and Szephalom have completed more than 80 percent of their plowing. Other communities such as Megyaszon and Tiszalucon, are completing only the first half of their work because kulaks are sabctaging the farm work. Not only have some of them not started on deep plowing but they have not even taken in their corn stalks. Fall work has been completed by 13 producer cooperatives of the county, and state farms have completed 83 percent of their deep plowing.

In Pert County fall work has been completed by the following producer cooperative groups: "Pozsa" in Solt, "Kossuth" in Kiskoros, "Len in Szigetcsep, "Dozsa" in Apostag, "Dozsa" in Szabadszalas, "Voros Saikra" in Kiskunhalssi, and "Sarlo Kalapacs" in Ujbaracska.

Tractors from the Halas machine-tractor station are working day and night to help the working peasants and cooperatives complete their work.

In general, Pest County is behind in deep plowing, especially in the cities. Kalocsa is the only city in the county which has completed more than 50 percent of its work. On the other hand 17 towns in the county have already completed their work. Vac District is ahead in the competition among the districts of Pest County, but Alsodabas and Kunszentmiklos districts have also shown good results. Budakornyek, Gyorro, and Szentendre districts have performed poorly.

RAINS HINDER DEEP PLOUGHING -- Szabad Szc, No 272, 23 Nov 49

Up to 19 November, Zala and Vas counties were the only two which had completed plan estimates for deep-ploughing operations. Sopron had completed its operations by 84.6 percent, Veszprem by 82.2 percent, Somegy by 80 percent, and Csongrad by 75 percent.

50X1-HUM

The counties of Fejer, Bac-Bodrog, Park, Tolma and Csanad are even further behind. In fact, Fejer, Tolma and Baranya counties have not even finished gathering in the corn stalks. As a result, the stocks have lost much of their value as fodder because of the rains. Of more importance, the corn stalks retard deep-ploughing operations.

Rains during the first half of November have greatly retarded deepploughing operations, but the soil is drying again and operations will be resumed with the greatest speed because it is very important to the national economy to complete deep ploughing on time. In the future, deep ploughing must be started earlier and more emphasis placed on the tractor stations by using them day and night.

CSONGRAD COUNTY THIRD TO COMPLETE DEEL PLOUGHING -- Szabad Szo, No 278, 30 Kov 49

Csongrad County is the third to complete its deep ploughing, following Zala and Vas counties. Other counties in the deep-ploughing competition line up as follows: Somogy County 95.1 percent completed, Sopron 95.7, Veszprem 95.3, Komarom-Esztergom 89.3, Szatmar-Bereg 88, and Bekes County 83.6 percent. Szolnok, Fejer, and Bacs-Bodrog counties are in last place with less than 50 percent of the work completed.

In Fejer County many corn stalks remain to be taken in, especially in the Alsozentivan, Eloszallas, Seregelyes and Szekesfehervar regions.
